

# Noah Aghedo

## Software Engineer

### Summary

As an entry-level Full-Stack developer, I am skilled in front-end development technologies such as HTML, CSS, JavaScript, and React.js. I have some experience with APIs and integrating them into web applications, but my expertise in back-end development is still developing. Nonetheless, I am eager to learn more about back-end technologies like Node.js and databases like MySQL and MongoDB. I am a fast learner, a team player, and passionate about building user-friendly web applications.

### Experience / Projects

#### Freelancing

May 2021 to present

I have acquired some experience by building websites for small organisations and individuals. I have created full-stack web applications to assist these small and medium enterprises.

#### Shopping Cart

I created a shopping cart that lets users add, remove and delete items from the cart. I fetched from an external API and also used the Context API to manage state globally.

### Education

#### University of Benin

2015 to 2021

#### Bachelor of

#### Engineering(Petroleum)

3.37/5 GPA

### Languages / Libraries / Frameworks / Tools

- HTML
- CSS
- Tailwind CSS
- JavaScript
- TypeScript
- React.js
- Next.js
- Node.js
- Express.js
- MongoDB
- Git
- Github
